To Whom It May Concern,

**RE: MR. JOAKY JOAO BANDZO (ID NUMBER: 8702155511085)**

Mr. Joaky Joao Bandzo visited our department on October 13, 2023, to request documentation concerning his hearing status.

Mr. Bandzo was previously examined by Dr. W.H. Odendaal, a specialist in Otolaryngology, on February 14, 2012. Dr. Odendaal's medical report confirms that Mr. Bandzo has been diagnosed with Sensory Neural Hearing Loss, which is believed to be potentially related to a congenital deafness condition, given that Mr. Bandzo's sibling also experiences hearing impairment.

In light of our evaluation performed by the Tshwane District Hospital Audiology Department on October 18, 2019, the assessment revealed a moderate-to-severe Sensorineural hearing loss across the frequency range of 1000kHz to 8000kHz. The recorded hearing thresholds did not exceed 70 decibels. Consequently, on November 6, 2019, Mr. JJ Bandzo was equipped with bilateral hearing aids to address his hearing condition. It is worth noting that an aided Audiogram was not conducted due to the unavailability of the necessary software.

Warm Regards

Faatima Joosub  
Audiologist
